

## AMERICAN UV GEL INSTRUCTION

### **Natural Nail Overlay:**

- 1- *Prepare the nails: With a polish remover, remove nail polish. Push back the cuticle with a cuticle pusher. Using a nail file, lightly file the natural nail to remove the shine. Then, remove all dust from nails.*
- 2- *Apply the PRE-NAIL PREP generously to the natural nail plate to ensure strong adhesion. When the PRE-NAIL PREP dries to a chalky white color, the nail is ready for the BASE GEL.*
- 3- *Starting from the cuticle area and moving to the free edge of the nail, apply a thin coat of BASE GEL to the natural nail. If the BASE GEL is too thick, it may turn yellow or lift. Under the UV light, cure the nails for one minute., While the first hand is curing, you can begin to work on the other hand.*
- 4- *After the nails have been cured, apply a thin layer of CLEAR GEL to each nail. This will create a glossy look. Allow the CLEAR GEL to cure under the UV light for at least one minute. A second coat can be applied for additional strength.*
- 5- *To prevent lifting, inspect each nail to see if gel is touching the cuticle or surrounding areas. If there is, use the pusher to remove it.*
- 7- *Once the CLEAR GEL has cured, apply a thin coat of FINISHING GEL to each nail. Allow the FINISHING GEL to cure under the UV light for at least one minute.*
- 8- *Once the FINISHING GEL has cured, gently pat each nail from the cuticle to the free edge with a cotton ball lightly saturated with GEL CLEANSE to remove any sticky residue. To avoid dulling, use a different cotton ball for each hand.*

### **TIP APPLICATION**

- 1- *Prepare the nails follow steps 1 (Natural Nail Overlay).*
- 2- *Find the correct tip size and glue on. First start by filing the side and the tip to form the desired shape. Second buff the tip and glue line. Remove all dust from nails.*
- 4- *Apply PRE-NAIL PREP generously to natural nail plate, to ensure the best adhesion, as you may have touched the natural nail with you finger and placed oil on the nail plate.*
- 5- *Continue with steps 3-8 (Natural Nail Overlay).*

### **MAINTENANCE**

- 1- *Prepare the nails follow steps 1 (Natural Nail Overlay). Using a nail file lightly file the existing gel blending with the new growth of the natural nail. Remove all dust from the nail.*
- 2- *Apply PRE-NAIL PREP to the natural nail and let dry.*
- 3- *Follow above applications 3-8 (Natural Nail Overlay).*
