| 12.1 | Environmental Stability:<br>The components of this product will slowly degrade over time into a variety of organic compounds. Specific environmental data<br>available for the components of this product are as follows:  |
|      | <u>Ethyl Acetate</u> : Koc = 0.73. Water solubility: 64,000 mg/l. Bioconcentration Factor = 4-14. Bioconcentration is not anticipated to be significant. This compound can be removed from contaminated environments from volatilization, and biodegradation. This compound's half-life in water is 6.1 hours.                               |
|      | <u>Butyl Acetate</u> : Koc = 1.82. Water solubility: 120 parts H <sub>2</sub> O at 25°C (77°F). Bioconcentration Factor = 4-14. Bioconcentration is not anticipated to be significant. This compound can be removed from contaminated environments from volatilization, and biodegradation. This compound's half-life in water is 6.1 hours. |
|      | <u>Isopropyl Alcohol</u> : Log Kow = 0.05-0.14. Isopropyl alcohol occurs naturally; it is generated during microbial degradation of plant and animal wastes. When released on land or water, it is apt to volatilize and biodegrade. The estimated half-life in water is 5.4 days. Isopropyl alcohol is not expected to bioconcentrate.      |
